

OUR MISSION

AN INNOVATIVE GOVERNMENT

Governments are facing more challenges than ever while change is happening faster and faster. As governmental organizations and their employees are impacted, they have to show flexibility and innovation. New ways of thinking and acting are needed to enable organizations to respond quickly and effectively to an ever-changing environment.

Let's Challenge Government

We create networks of governmental innovators

Innovation is never simple, but you can boost it if you know how to structure it. Under the slogan 'Let's Challenge Government', Ynnovate's mission is to make government innovative. We achieve this through our network of Ynnovators, government employees who are trained to lead innovation processes in their own organizations. They all use the Ynnovate method, an innovative way of working together based on the principles of Scrum teamwork, creative problem solving and design thinking.

Ynnovate educates, activates and supports local networks of Ynnovators. We started in the Netherlands in 2011 and now have more than 1,000 Ynnovators across every area of Dutch government. Ynnovate focuses on new ways to increase government organizations' ability to innovate, often starting with skill development.

Ynnovate is actively looking for opportunities to build successful government networks of Ynnovators in other countries and would be very happy to share our knowledge and methods. Want to know more? Please share the flyer and feel free to contact Fleur Pullen - fleure@ynnovate.it
